Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

☒ Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Section 1 — Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Conflict Minerals Disclosure

In accordance with the requirements of Item 1.01(c) of Form SD, Stratasys has posted the Conflict Minerals Report filed as Exhibit 1.01 hereto to its publically available Internet website at <http://www.stratasys.com/corporate/investor-relations/financial-information/sec-filings>.

Item 1.02 Exhibit

Stratasys has filed its Conflict Minerals Report as Exhibit 1.01 hereto as required by Item 1.01 of Form SD.

Section 2 — Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit 1.01 — Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

Signatures

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Stratasys Ltd.

Chief Financial Officer and
Chief Operating Officer

Conflict Minerals Report of Stratasys Ltd.

This is the Conflict Minerals Report of Stratasys Ltd. for calendar year 2014 in accordance with Rule 13p-1 of the Securities Exchange Act of 1934 (“Rule 13p-1”) and Form SD. Numerous terms in this Report are defined in Form SD. The reader is referred to Form SD and to 1934 Act Release No. 34-67716 (August 22, 2012) for such definitions.

Stratasys Ltd. (“Stratasys” or “We”) is the product of the 2012 merger of two leading additive manufacturing companies, Stratasys, Inc. and Objet Ltd. Our ordinary shares are listed on the NASDAQ Global Select Market under the trading symbol “SSYS”. We have dual headquarters. One of our two principal places of business is located at 7665 Commerce Way, Eden Prairie, Minnesota. Our registered office and other principal place of business is located at 2 Holtzman Street, Science Park, P.O. Box 2496, Rehovot 76124, Israel.

We are a leading global provider of additive manufacturing, or AM, solutions for the creation of parts used in the processes of designing and manufacturing products and for the direct manufacture of end parts. Our solutions include products ranging from entry-level desktop 3D printers to systems for rapid prototyping, or RP, and large production systems for direct digital manufacturing, or DDM. We also develop, manufacture and sell materials for use with our systems and provide related services offerings. We believe that the range of 3D printing consumable materials that we offer, consisting of 38 Polyjet and Fused Deposition Modeling, or FDM, cartridge-based materials, five Smooth Curvature Printing, or SCP, inkjet-based materials and 138 non-color digital materials, and over 1,000 color variations, is the widest in the industry. Our services offerings include our Stratasys Direct Manufacturing printed parts service as well as our professional services.

Our products and services are used in different applications by customers in a broad array of industries, including aerospace, automotive, consumer electronics, dental, jewelry and more. Our customers range from individuals and smaller businesses to large, global enterprises, and we include a number of Fortune 100 companies among our customers.

We offer a broad range of systems, consumables and services for additive manufacturing. Our wide range of solutions, based on our proprietary AM technologies and production materials, enhance the ability of designers, engineers and manufacturers to:

- visualize and communicate product ideas and designs;
- verify the form, fit and function of prototypes;
- manufacture tools, jigs, fixtures, casts and injection molds used in the process of manufacturing end-products;
- manufacture customized and short-run end-products more efficiently and with greater agility; and
- produce objects that could not otherwise be manufactured through subtractive manufacturing methodologies.

Our product portfolio consists of five series of AM systems and the consumables used in those systems. These series are the MakerBot desktop series, the Idea Series, the Design Series, the Production Series and the Dental Series. Collectively, this portfolio offers a variety of performance options for our customers, depending on their desired application, as well as on the nature and size of the designs, prototypes or end-products they seek to produce. Our wide range of systems allows us to offer our customers systems at a number of different price points, depending on the features that our customers desire.

Our AM systems are described below:

- **Design Series:** Our Design Series includes the Dimension and Objet brands. The Dimension brand features our FDM technology and the Objet brand features our PolyJet technology. The technology available in this series makes it well suited for all aspects of RP, from design visualization and communication to form and fit verification to model building for functional testing. This series also offers a variety of products that provide customers with a broad range of choices of features such as printing capacity, production speed and price. The Dimension product line allows users to create parts in ABSplus plastic. This material enables production of parts with the strength required for true form, fit and functional testing. The Connex Systems are our most advanced PolyJet-based printer line featuring the highest capacity and offering the broadest set of features, including the ability to jet three materials simultaneously, with rigid, flexible and color characteristics, in virtually unlimited combinations, in a single build.
- **Production Series:** The Production Series includes our Fortus, Polyjet and SolidScape brands, all of which are typically used for DDM applications. 3D Production Systems driven by PolyJet™ technology work by jetting state-of-the-art photopolymer materials in ultra-thin layers onto a build tray, layer by layer, until the part is complete. The intuitive Objet Studio™ software manages the process. And, with multi-material 3D production systems, the user can combine different material properties in the same part, in a single print — gaining ultimate versatility. Our proven FDM® technology is the foundation for the Fortus® 3D Production Systems. Durable, production-grade thermoplastic is heated in an extrusion head and deposited in thin layers on a modeling base. The part is built, layer upon layer, with exactness from the bottom up. Insight™ software provides advanced control over build parameters. When the part is complete, the soluble or breakaway support material is removed, leaving an accurate, durable part that’s environmentally stable. We also offer our SolidScape line of 3D printers for DDM applications. This line of products combines patent-protected, SCP thermoplastic ink-jetting technology and high-precision milling of each layer, with our proprietary graphical front-end ModelWorks software. Objects created with these systems feature extremely high pattern resolution and accuracy and are used primarily for jewelry products and dental applications.
- **MakerBot Replicator series:** Our MakerBot Replicator series represents our 3D desktop, compact, and professional-grade printers. Our desktop and compact printers are affordable, and designed for easy, desktop use and are typically used by individuals operating alone or within an enterprise. Our larger, professional printer has a large build volume ideal for industrial prototypes, models and products. We acquired MakerBot in August 2013 to enhance our desktop offerings. In addition to the Replicator printer series, our MakerBot portfolio

includes the Digitizer, which is a 3D scanner that allows customers to scan an object and convert it into a digital file that can subsequently be printed.

- **Idea Series:** The Idea Series includes our lower capacity, affordable set of 3D printers for professional use. This series comprises the MoJo and uPrint product families, both of which are FDM-based. These products are designed for easy use in an office environment and produce professional grade parts using our ABS line of thermoplastics.
- **Dental Series:** Each Dental Series 3D printer runs on one of two patented, industry-leading technologies to build models, dental appliances and casting wax-ups in-house, directly from digital files. Our PolyJet technology enables the production of surgical guides, fitting models, veneer try-ins and orthodontic appliances from materials specially engineered for dental applications. Our wax-deposition-modeling, or WDM, technology drives 3D printers that enable the production of crowns, bridges and partial dentures.

As an issuer that offers products that include tin, tungsten, tantalum and gold (“Conflict Minerals”) necessary in our manufactured products, we are subject to Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 Section 1502 reporting requirements associated with Conflict Minerals, and the SEC’s Rule 13p-1.

1. Reasonable Country of Origin Inquiry

In accordance with our Conflict Minerals Policy, Stratasys has concluded in good faith that during the 2014 calendar year, we have manufactured and contracted to manufacture products containing all four Conflict Minerals and have determined that the use of these minerals is necessary to the functionality or production of these products.

We performed a reasonable country of origin inquiry (“RCOI”) simultaneously with the due diligence phase in which we engaged to determine whether the Conflict Minerals necessary to the functionality or production of our products were or were not “DRC conflict free.” This was done simultaneously due to the large number of applicable suppliers from which we source materials that we surveyed and the time frame in which we needed to complete both the RCOI and due diligence. Our RCOI employed several methods to assess whether the necessary Conflict Minerals in our products originated from the Democratic Republic of the Congo or a country that shares an internationally recognized border with the Democratic Republic of the Congo (collectively, “Covered Countries”). These measures consisted primarily of the following actions:

- a) Internal assessments of our products to determine which contain or may contain necessary Conflict Minerals.
- b) As part of our risk based approach we identified suppliers from which we purchased goods directly (“Tier 1 Suppliers”), as well as electronic manufacturers with whom our Tier 1 Suppliers contracted for in order to supply us the goods. In order to reduce the risk of not getting full information we have decided not to rely solely on our Tier 1 Suppliers to provide information on their entire supply chain,

3

and to approach directly also the electronic manufacturers, even though we have not purchased from them directly. The cumulative number of suppliers and manufacturers we have approached is 804 suppliers.

- c) Solicited survey responses using the standard template designed by the *Conflict Free Sourcing Initiative (CFSI)* (the “Conflict Minerals Reporting Template”). We engaged our supply chain to respond to the Conflict Minerals Reporting Template by referring suppliers to training materials that included an overview of the law and instructions on how to complete the Conflict Minerals Reporting Template.
- d) Assessment of responses received for information that would identify as inconsistent, incomplete, or inaccurate responses. Responses that failed any of the “red flag” review tests were identified for additional follow up.
- e) To non-responsive suppliers, we sent periodic reminders to provide surveys or updated responses.

Based on the RCOI conducted, Stratasys has reason to believe that a portion of the Conflict Minerals necessary to the functionality of its products originated in the Democratic Republic of the Congo or an adjoining country and knows, or has reason to believe, that those necessary Conflict Minerals may not be from recycled or scrap sources. Based on this result, Stratasys conducted due diligence activities and details these efforts in this Conflict Minerals Report.

2. Due Diligence

Due diligence design

In accordance with Rule 13p-1 and Form SD, we undertook due diligence to determine whether the Conflict Minerals necessary to the functionality or production of our products were or were not “DRC conflict free.” We designed our due diligence measures to be in conformity, in all material respects, with the internationally recognized due diligence framework as set forth in the Organization for Economic Cooperation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD, 2013) (“OECD Framework”) and related supplements for Conflict Minerals.

The 5 steps defined in the OECD Due Diligence Guidance are: (1) establishment of strong internal company management systems; (2) identification and assessment of risks in the supply chain; (3) design and implementation of a strategy to respond to risks as they are identified; (4) carry out independent third-party audits of smelters’ and refiners’ due diligence practices; and (5) report annually on supply chain due diligence.

Due diligence measures undertaken

The due diligence measures we undertook consisted primarily of:

4

a. Established strong company management systems.

We reviewed and maintained the company management systems previously established through the following actions:

- Reviewed the Stratasys Conflict Minerals Policy (available at http://files.shareholder.com/downloads/AMDA-FNA1K/3820661080x0x748757/72402B7D-BD98-4480-A580-59F519FDBC16/Stratasys-CM_Policy_FINAL_DISTRIBUTED_04-29-14.pdf) in order to assess whether any updates were required.
- Established Conflict Minerals Governance Charter to set the Conflict Minerals annual work plan including: Stratasys steps for compliance, objectives, time lines, internal management and cross functional team with identified roles and responsibilities, all to support supply chain due diligence.
- Established periodic meetings of the cross functional team, for the purpose of sharing best practices and monitoring our progress regarding the various steps required for compliance.
- Established a process whereby we engage with suppliers and refer them to training materials on line, which materials include an overview of relevant Conflict Minerals regulation and provide instructions on how to respond to the due diligence survey (which was based on the Conflict Minerals Reporting Template).
- Added a Conflict Minerals provision to our standard Terms and Conditions of Purchase to require suppliers to comply with our Conflict Minerals Policy and requirements.
- Established a process whereby we communicate the due diligence efforts to customers, suppliers and other relevant functions in our organization, as applicable.
- Established a grievance mechanism whereby concerns and violations of the Conflict Minerals Policy should be reported to Stratasys’ Chief Financial Officer & Chief Operating Officer and/or Vice President Legal affairs (at compliance@stratasys.com).

b. Identified and assessed risks in the supply chain

As part of our risk-based approach we have decided to focus on suppliers and electronics manufactures. We assessed two primary risks in our supply chain: (1) the risk of not receiving on time and accurate information from the supplier; and (2) the risk of not being able to replace a supplier while trying to move towards the goal of being a conflict free company.

As a result of this assessment, we segmented our suppliers into three risk levels (high, medium and low) which allowed us to invest our risk mitigation efforts according to the supplier level of risk.

c. Designed and implemented a strategy to respond to identified risks

The findings of the supply chain risk assessment were and continue to be reported to designated members of our senior management. As part of our risk management strategy we are continuing the trade with the suppliers while Stratasys continues with its efforts to investigate its supply chain.

5

Stratasys contacts suppliers whose responses are identified as incomplete, inconsistent or inaccurate. Stratasys also reviews supplier responses to track smelters and refiners in our supply chain that supply us with Conflict Minerals and have not received a conflict-free designation based on the Conflict Free Sourcing Initiative Conflict-Free Smelter Program or other independent third party validation program. Stratasys referred suppliers to training materials on line that included an overview of the law and instructions on how to complete the Conflict Minerals Reporting Template. We also sent follow up letters to high risk non-responsive suppliers, and to suppliers who declared the existence of Conflict Minerals in their supply chain from the DRC or adjoining countries from non-certified smelters.

d. Reviewed independent third-party audit of smelter/refiner due diligence practices

Stratasys is a downstream consumer of necessary Conflict Minerals and is many steps removed from smelters and refiners who provide minerals and ores. Therefore, Stratasys does not perform audits of smelters and refiners within the supply chain. As a result, Stratasys' due diligence efforts relied on reviewing cross-industry initiatives such as those led by the EICC and GESI, to conduct smelter and refiner due diligence.

e. Prepared this annual report on supply chain due diligence

Stratasys' Conflict Mineral Policy states that we will comply with Section 1502 of the Dodd Frank Act which includes filing a Form SD and this Conflict Minerals report with the SEC and posting publicly on the Internet.

3. Results of Assessment

We received responses from suppliers representing approximately a 70% response rate, containing the names and locations of smelters and refiners (see Annex 1) and country of origin see (annex 2) which process Conflict Minerals used in components provided by our suppliers.

Despite suppliers indicating that they source from the Covered Countries, these suppliers were unable to accurately report which specific smelters were part of the supply chain of the components that were sold to Stratasys in 2014.

As a result of this lack of information, Stratasys is unable to determine the full list of facilities used to process those necessary Conflict Minerals or their country of origin and to conclude whether or not the Conflict Minerals used in its products may have directly or indirectly financed armed groups in the Covered Countries. Stratasys' efforts to determine the mine(s) or location of origin included the use of the due diligence measures described above.

6

Additional Risk Factors

The statements above are based on the RCOI process and due diligence performed in good faith by Stratasys. These statements are based on the infrastructure and information available at the time. A number of factors could introduce errors or otherwise affect our conclusions.

These factors include, but are not limited to, gaps in product or product content information, gaps in supplier data, errors or omissions by or of suppliers, confusion over requirements of SEC final rules, gaps in supplier education and knowledge, lack of timeliness of data, public information not discovered during a reasonable search, errors in public data, language barriers and translation, supplier unfamiliarity with the protocol, conflict area sourced materials being declared secondary materials, companies going out of business in 2014, and smuggling of conflict area Conflict Minerals to countries beyond the Covered Countries.

Information gathered from our suppliers is not on a continuous, real-time basis, but rather information gathered from suppliers' information provided on the Conflict Mineral Reporting Template at that time.

We cannot be certain about our conclusions regarding the source and chain of custody of the necessary Conflict Minerals, as the information comes from direct and secondary suppliers and independent third party audit programs.

Continuous improvement efforts to mitigate risk

Stratasys continues to take, as applicable, the following steps to improve the due diligence process and mitigate the possibility that we are utilizing Conflict Minerals that benefit armed groups contributing to human rights violations:

- Continue to conduct and report annually on supply chain due diligence for the applicable Conflict Minerals, as required by Rule 13p-1.
- Work with suppliers that did not respond to Stratasys' 2013 and/or 2014 survey to help them understand the importance of this initiative to Stratasys and to encourage their participation in 2015.
- Attempt to validate supplier responses using information collected via independent, conflict-free smelter validation programs such as the Conflict Free Sourcing Initiative (CFSI) Conflict Free Smelter program to which we will provide financial support.
- Send follow up letters to high risk non-responsive suppliers, and to suppliers with Conflict Minerals from the Covered Countries from non-certified smelters.
